

ER2201 Session Delay Closures

October 23, 2024

Figs. 2 and 3 show closure delay distributions over 5.5 hours and histograms of absolute magnitudes for the multi-band and single-band delays.

The closure delay calculations of the total multi-band and single-band delays fail for EVY, EMY, ESY, ETY, MSY, MTY, MVY, SVY, TVY triangles. However, the delay closures for triangles EMV, ESV, ETV, EMS, EMT, MSV, MTV demonstrate good behavior. Figs. 4 and 5 show the total mbd and sbd closures for for $|\tau| < 500ps$ and $|\tau| > 500ps$ separately.

The legend for colored dots in the closure delay distributions is shown in Fig. 1.

Figure 1: Color legend for the closure triangles.

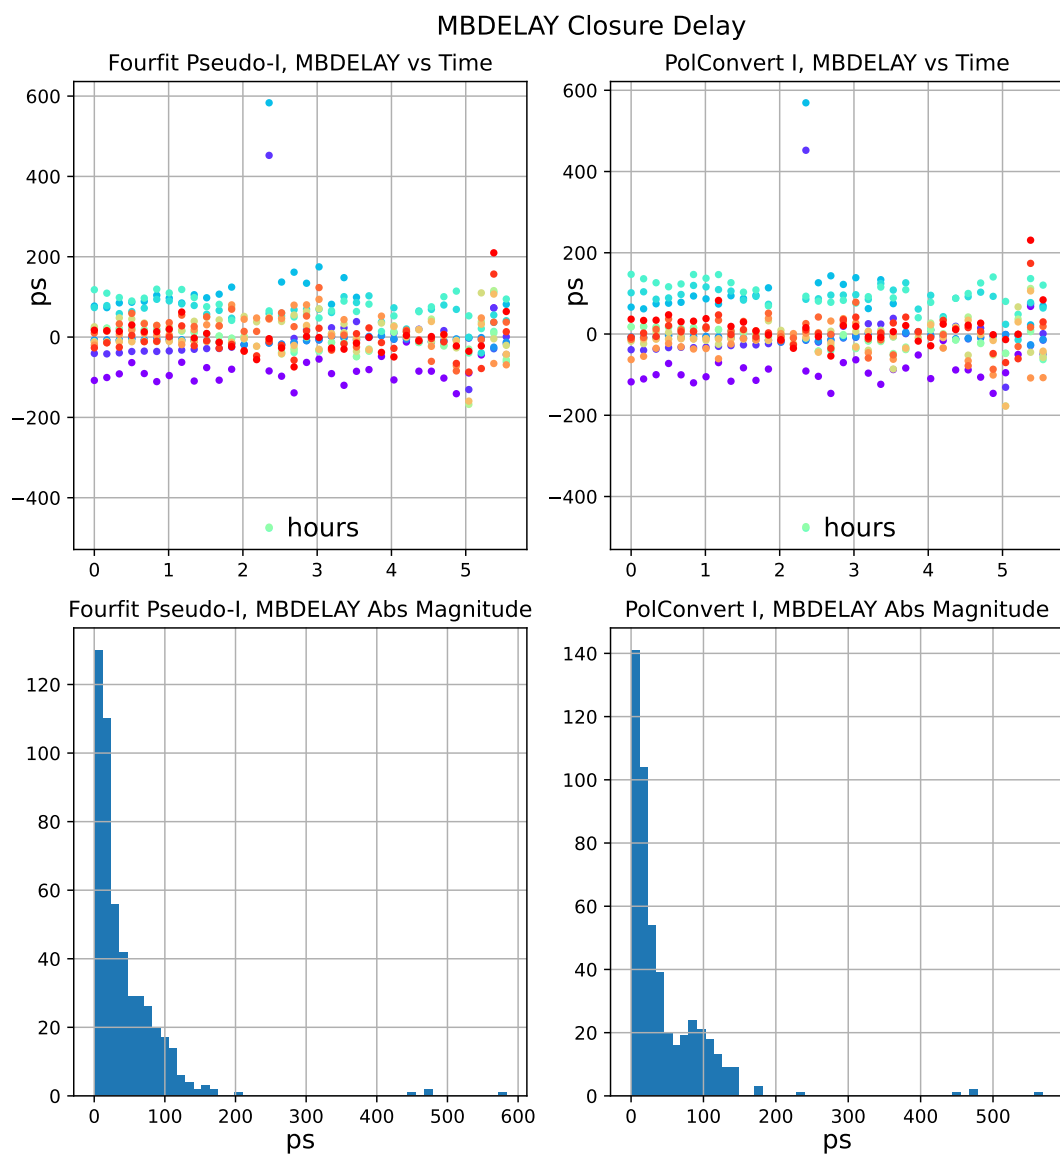

Figure 2: MBDELAY closure delay distributions over 5.5 hours and histograms of their absolute magnitudes.

Figure 3: SBDELAY closure delay distributions over 5.5 hours and histograms of their absolute magnitudes.

Figure 4: Total MBDELAY closure delay distributions over 5.5 hours and histograms of their absolute magnitudes.

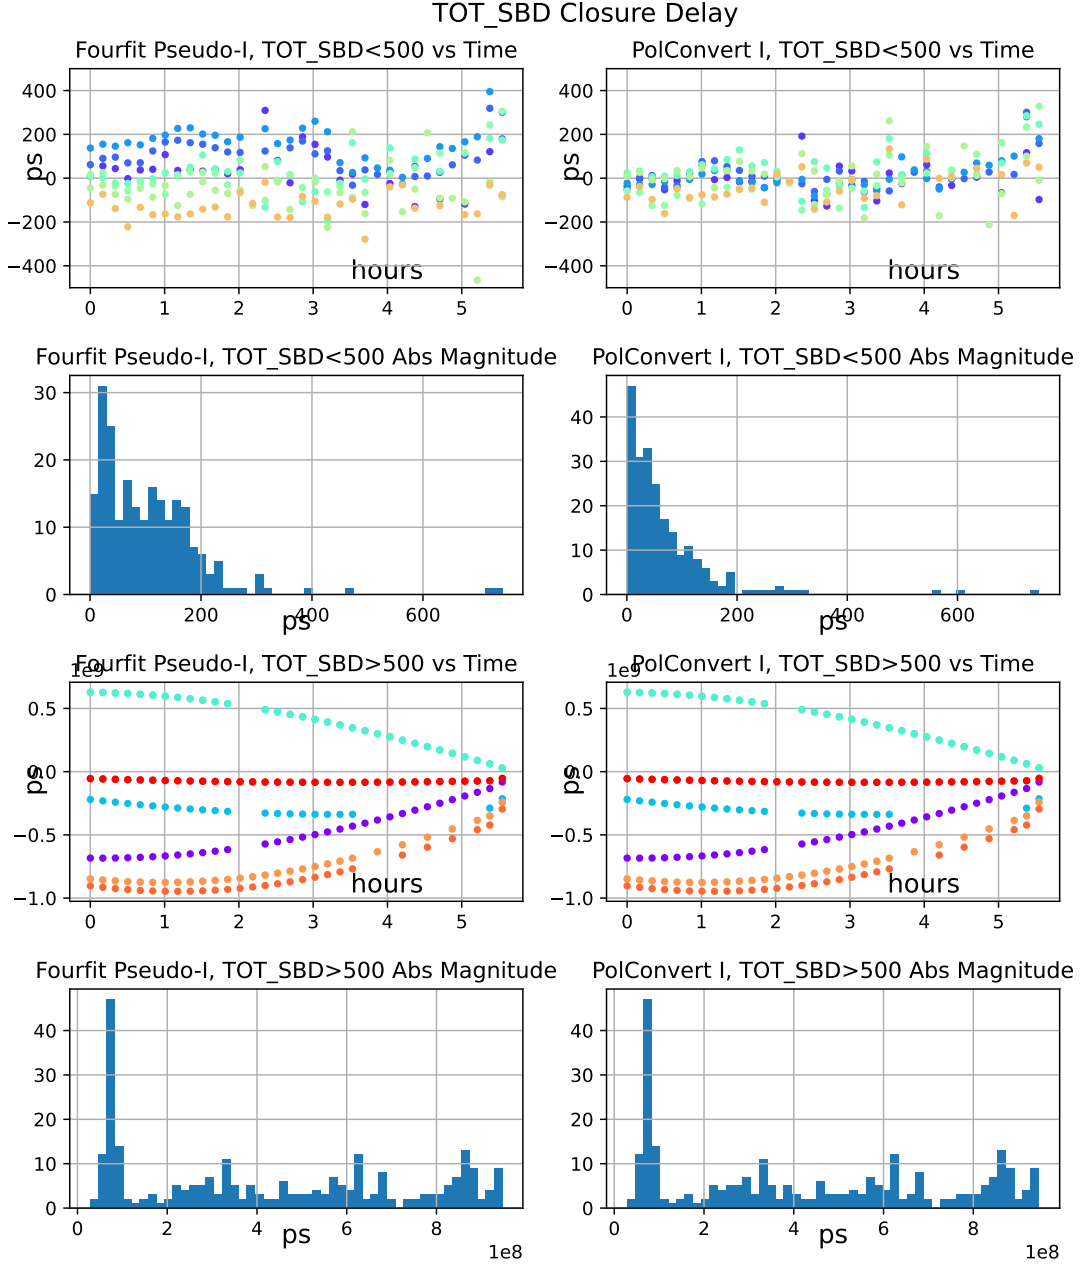

Figure 5: Total SBDELAY closure delay distributions over 5.5 hours and histograms of their absolute magnitudes.
